

A spatial representation of an Added Value Index for Regional Climate Models

James Ciarlo`, Erika Coppola, Adriano Fantini, & Filippo Giorgi

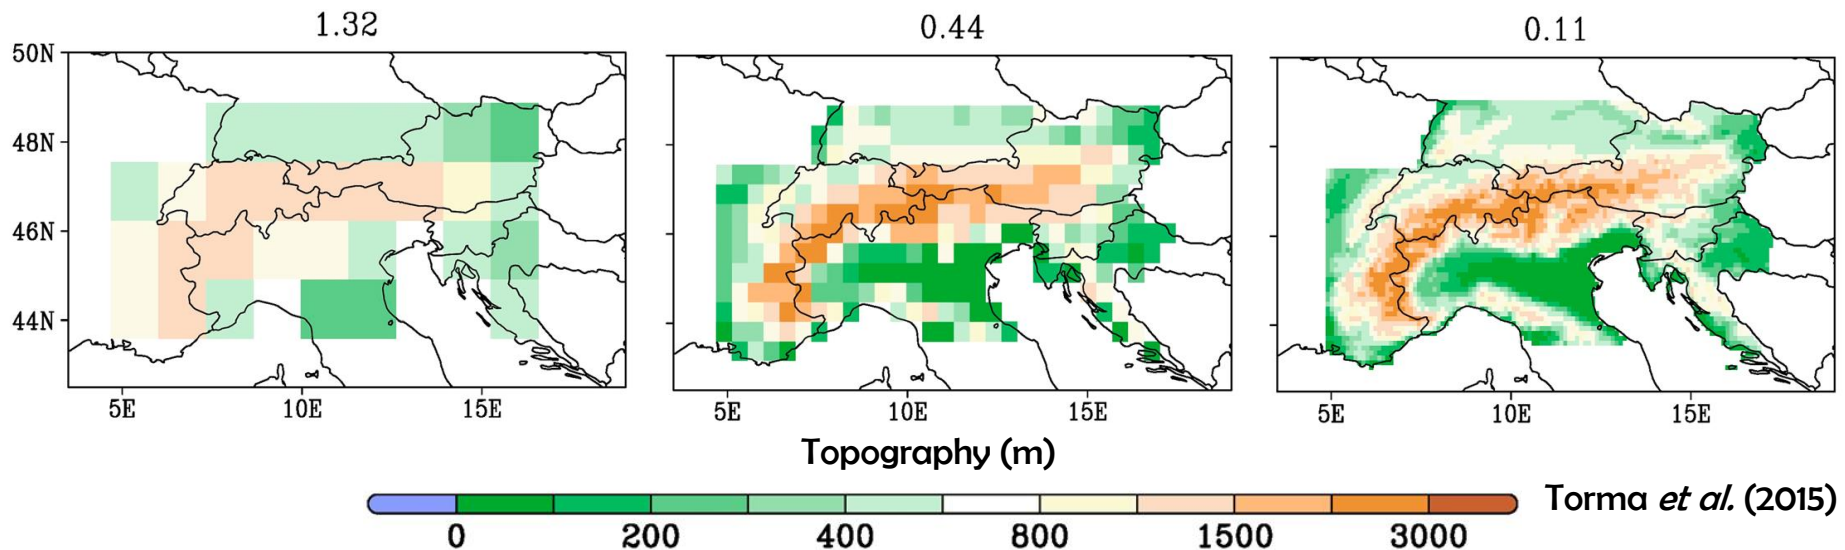

ICRC-CORDEX 2019, Beijing, 14-18 October 2019

Added Value

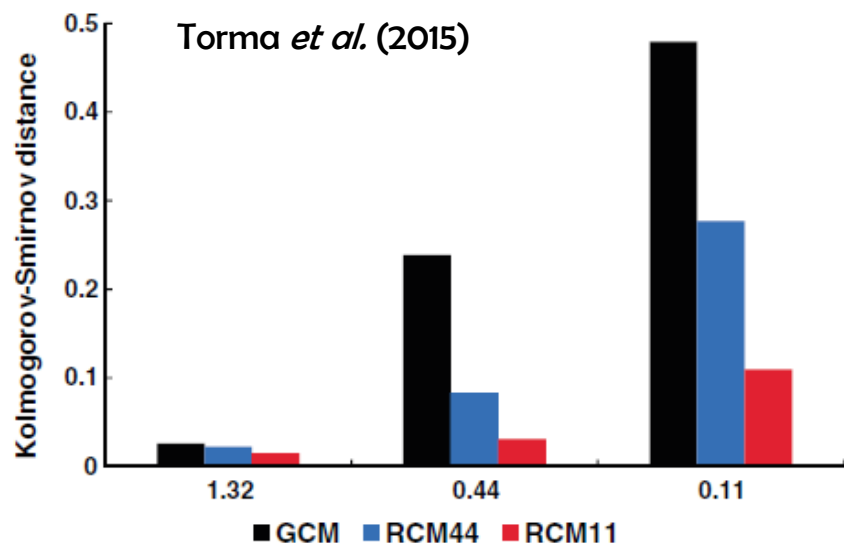

“Nested RCM simulations are indeed useful as climate downscaling tools to the extent that they add valuable information to that produced by GCMs”

Torma et al. (2015)

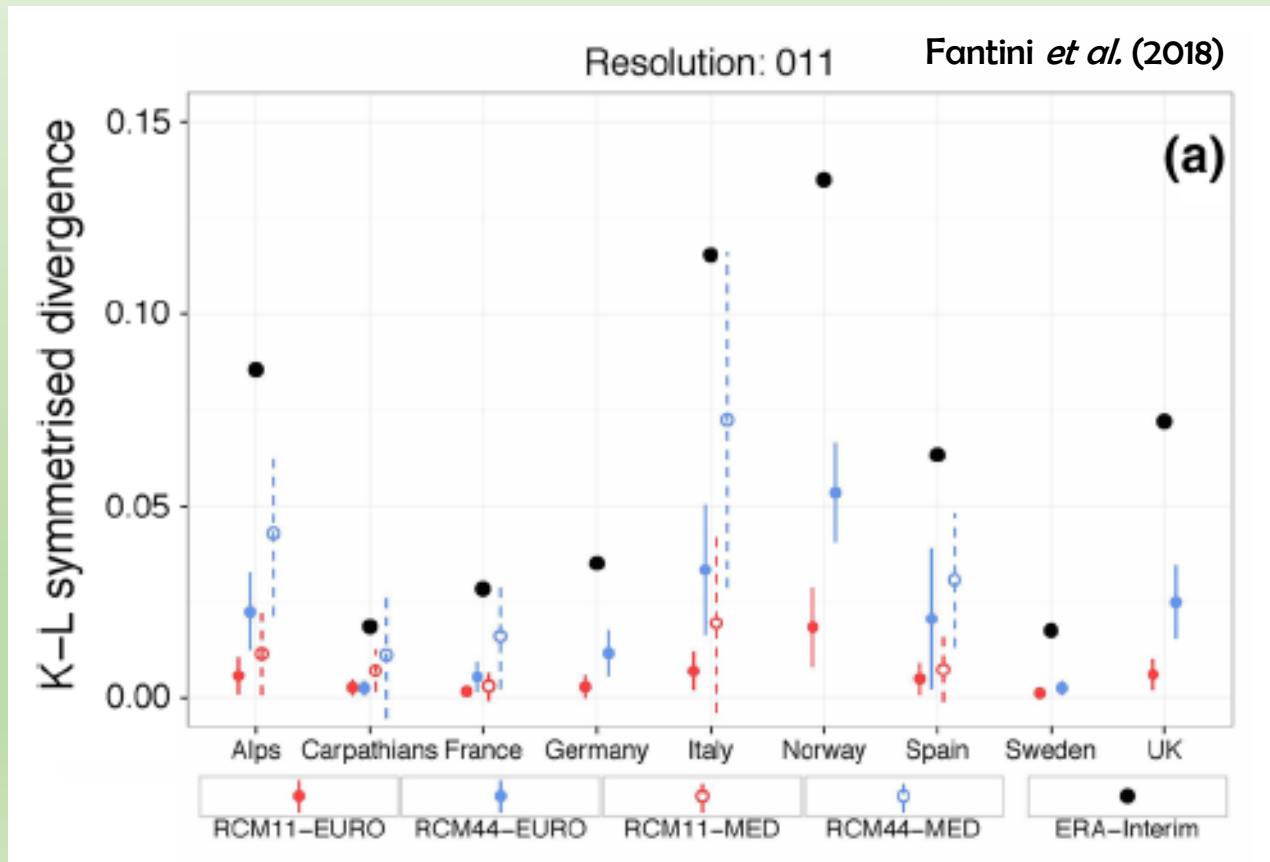

Kolmogorov-Smirnov Distance

maximum distance between two cumulative distribution functions

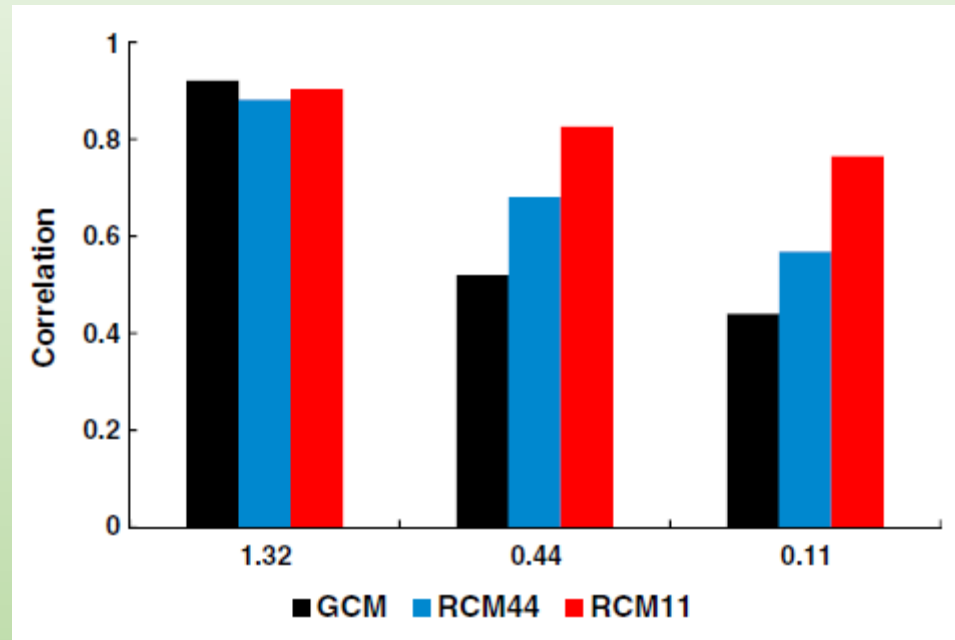

Kullback-Leibler Divergence

mean difference between PDFs

Spatial Correlation Coefficient

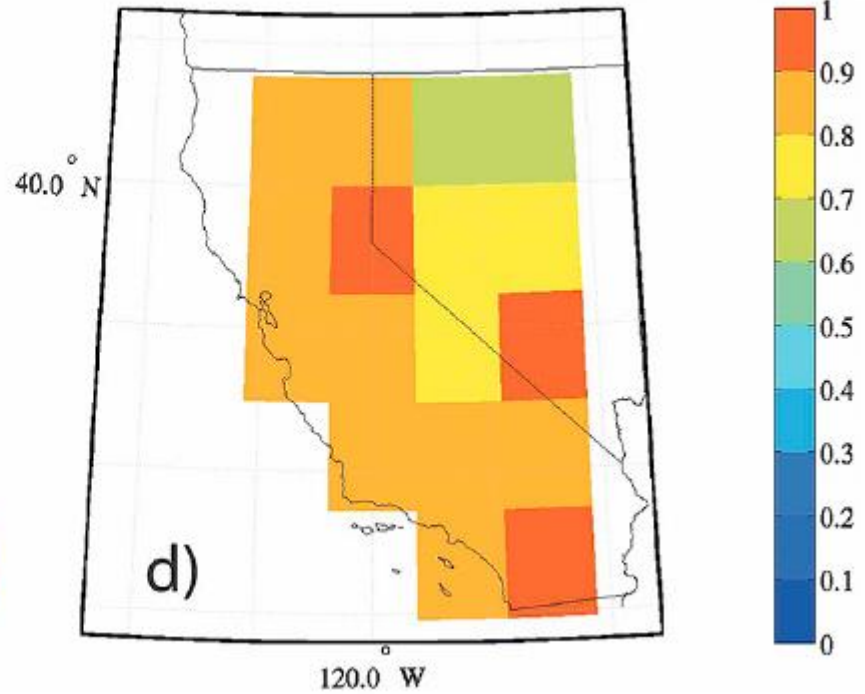

daily precipitation R95 ensemble averages, compared to EURO4M-APGD observations (Torma *et al.*, 2015)

Where is the Added Value?

Correlation Skill

Kanamitsu and Kanamaru (2007)

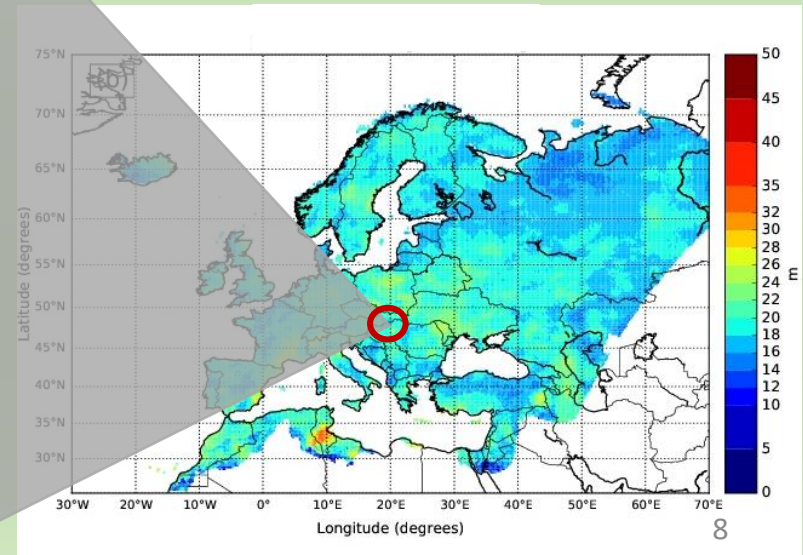

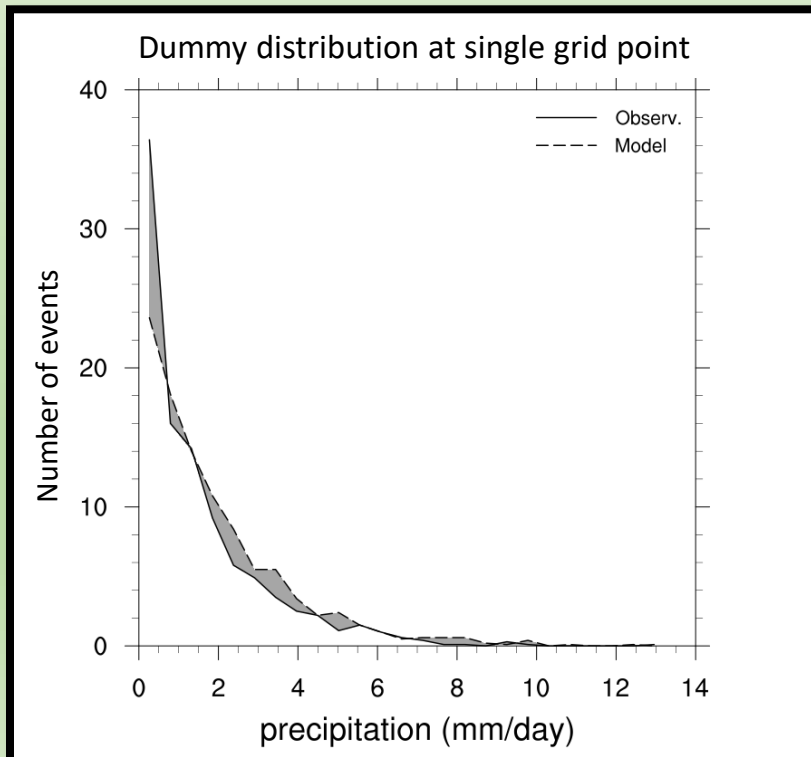

Proposed Method

1. Interpolate to common grid [ex. RCM]
2. Calculate distribution for each cell
 - Independent number of bins
 - Identical bin size [1 mm/day]
3. Calculate sum of differences

for EACH grid-cell!

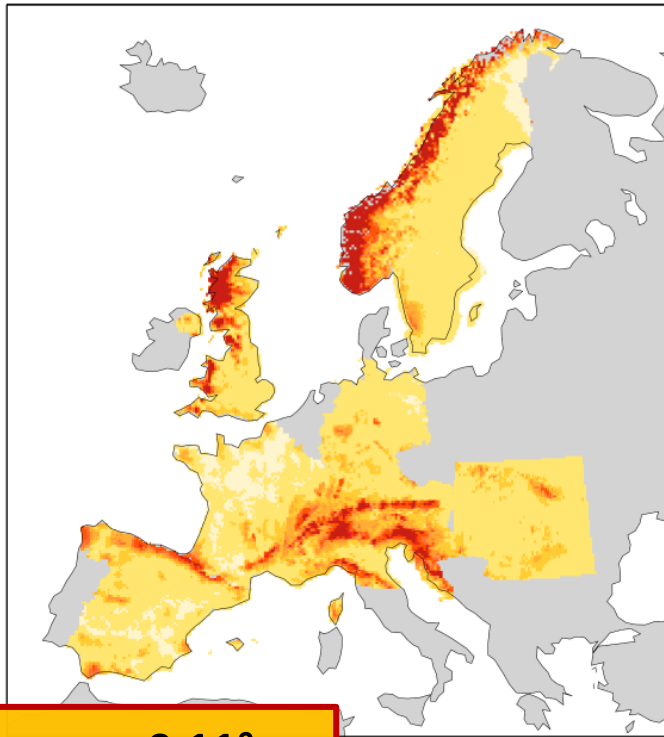

Relative Distribution Difference

$$D_{MOD} = \frac{\sum |N_M - N_O| \Delta v}{\sum P_O \Delta v}$$

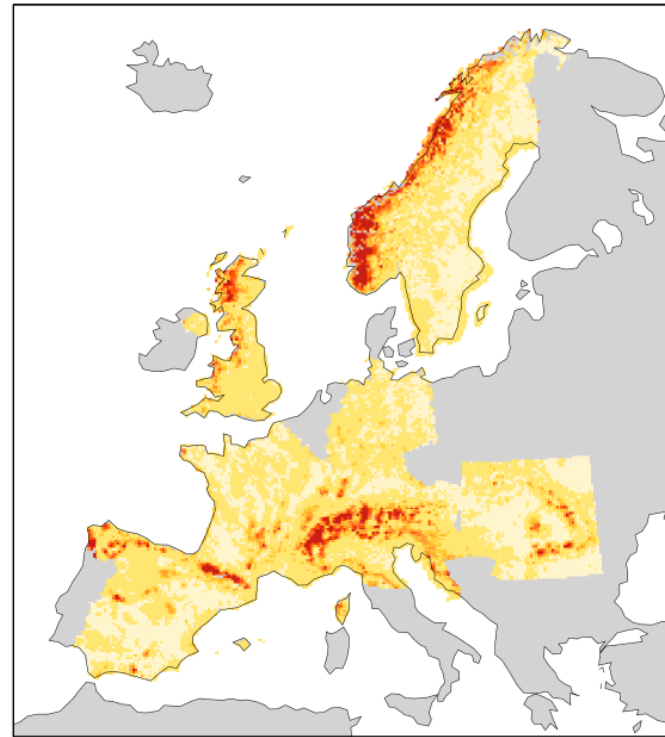

Distribution Difference

GCM ENSEMBLE

RCM ENSEMBLE

difference to OBS (mm/day)

0 30 60 90 120 150 180 210 240 270 300

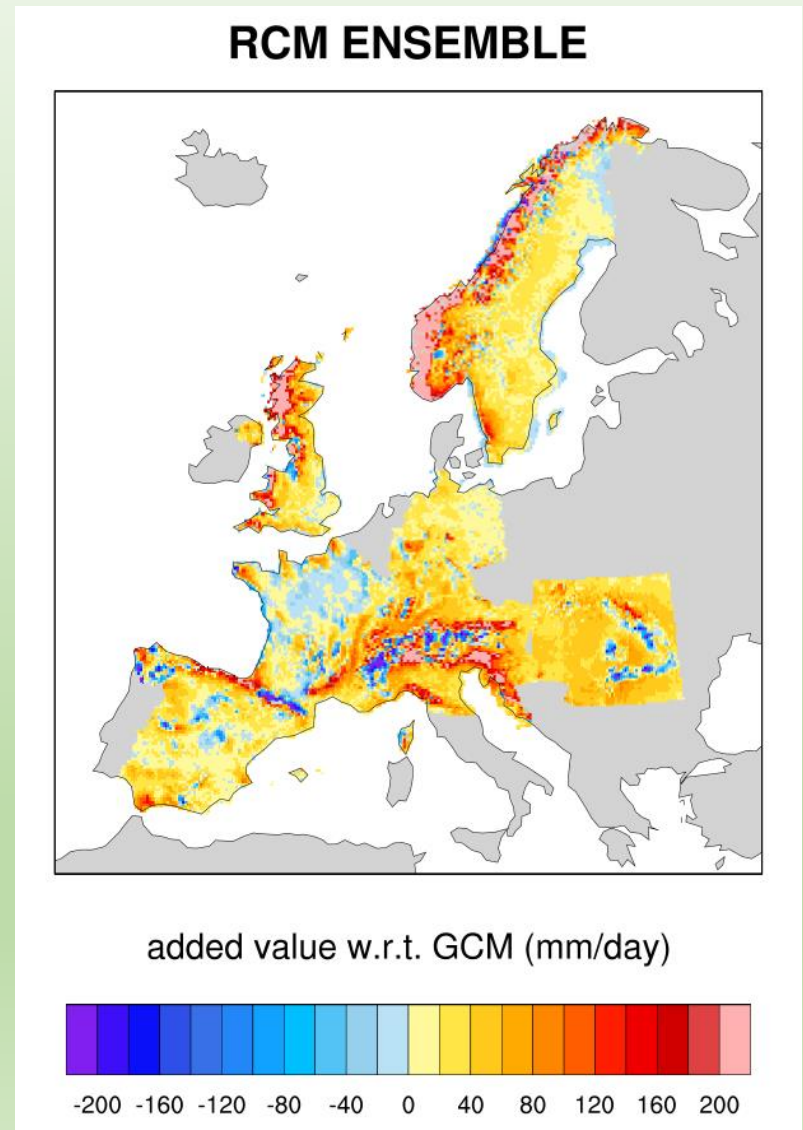

OBS max. res: 0.11°
34x EUR-11 ensemble
daily pr [1990-2008]

Added value

1. Interpolate to common grid [RCM]
2. Calculate distribution for each cell
3. Calculate sum of differences
4. **Compare the differences**
 - Empty GCM bin \rightarrow AV +1

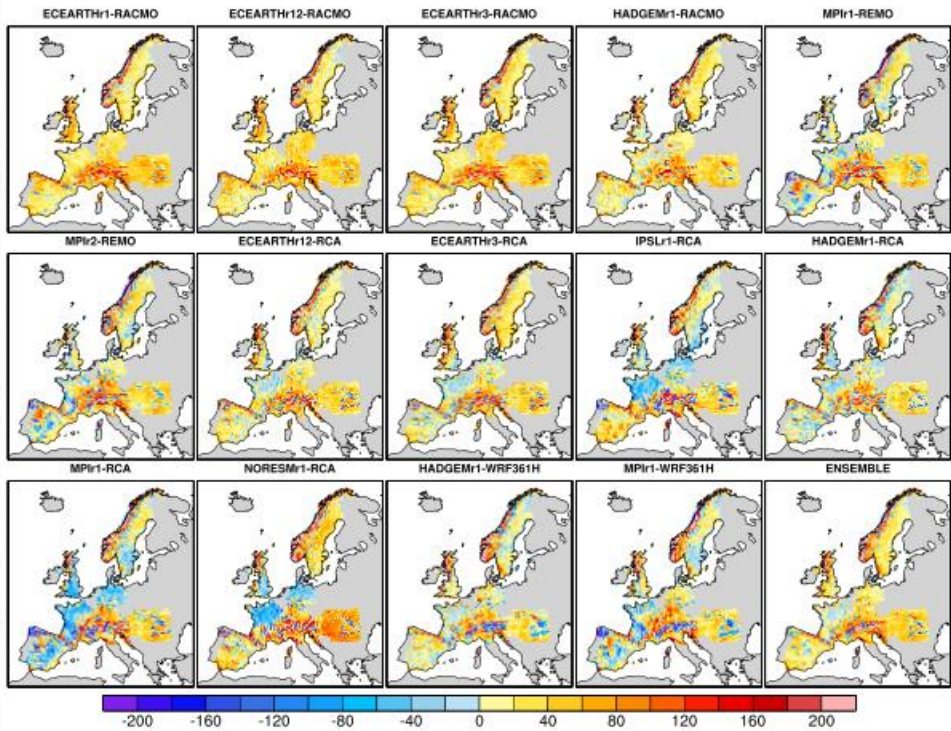

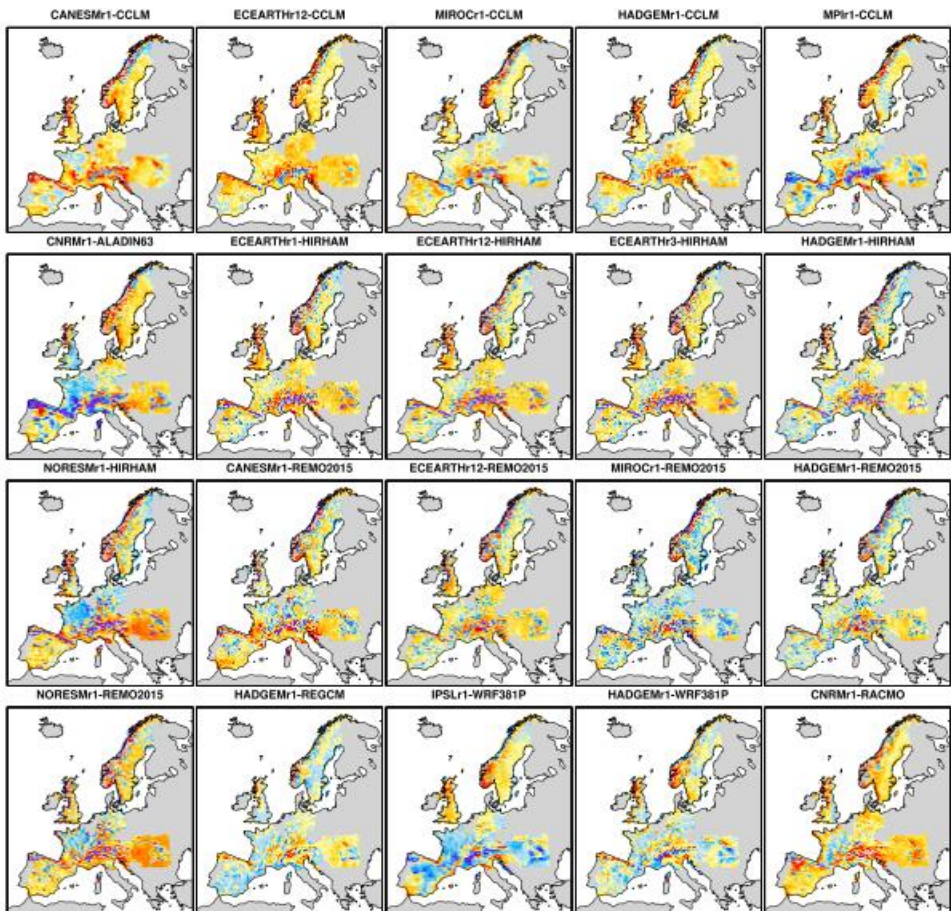

$$AV = D_{GCM} - D_{RCM}$$

Units depend on [Relative]
Distribution Difference

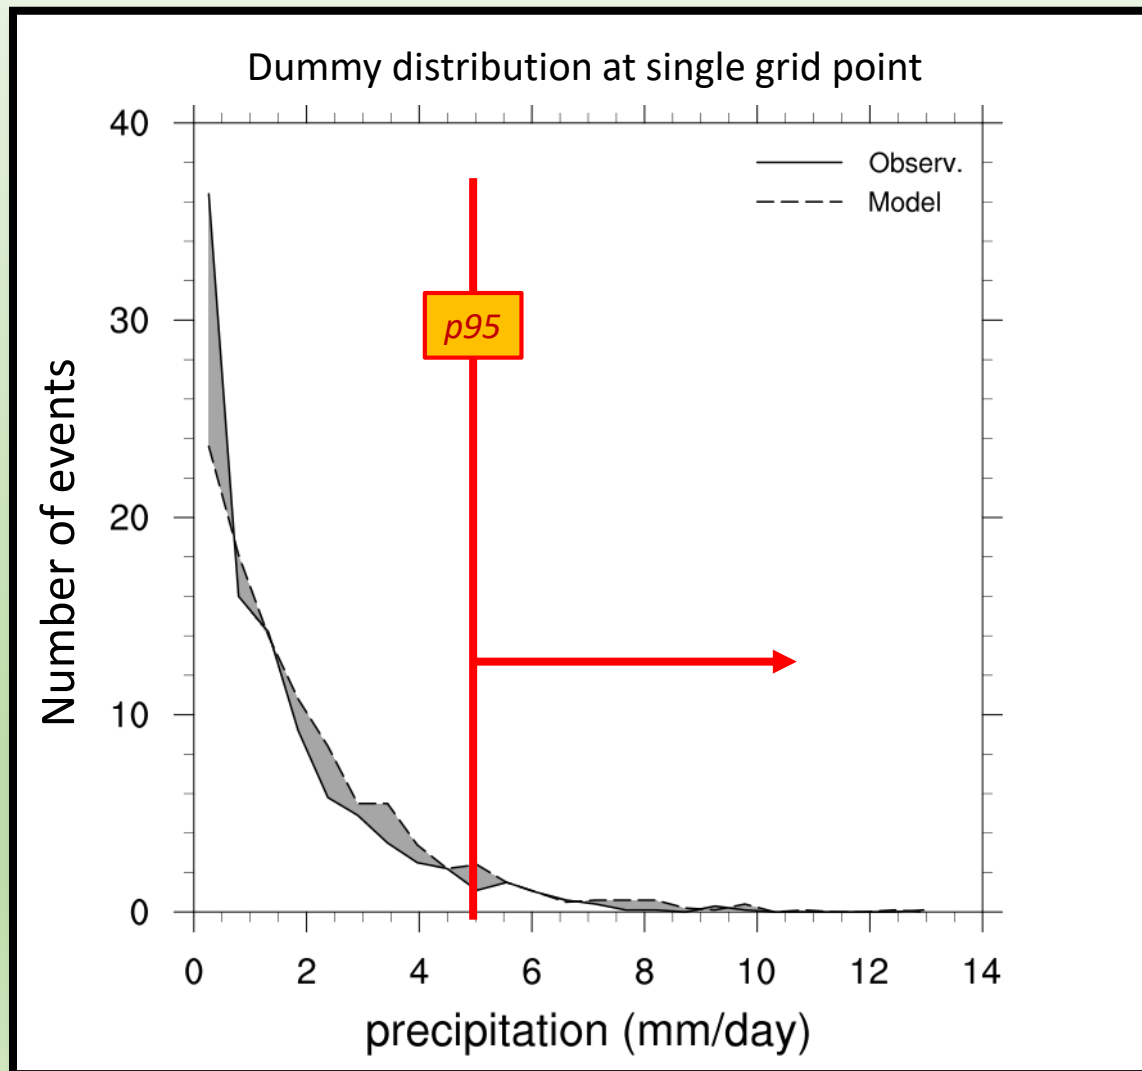

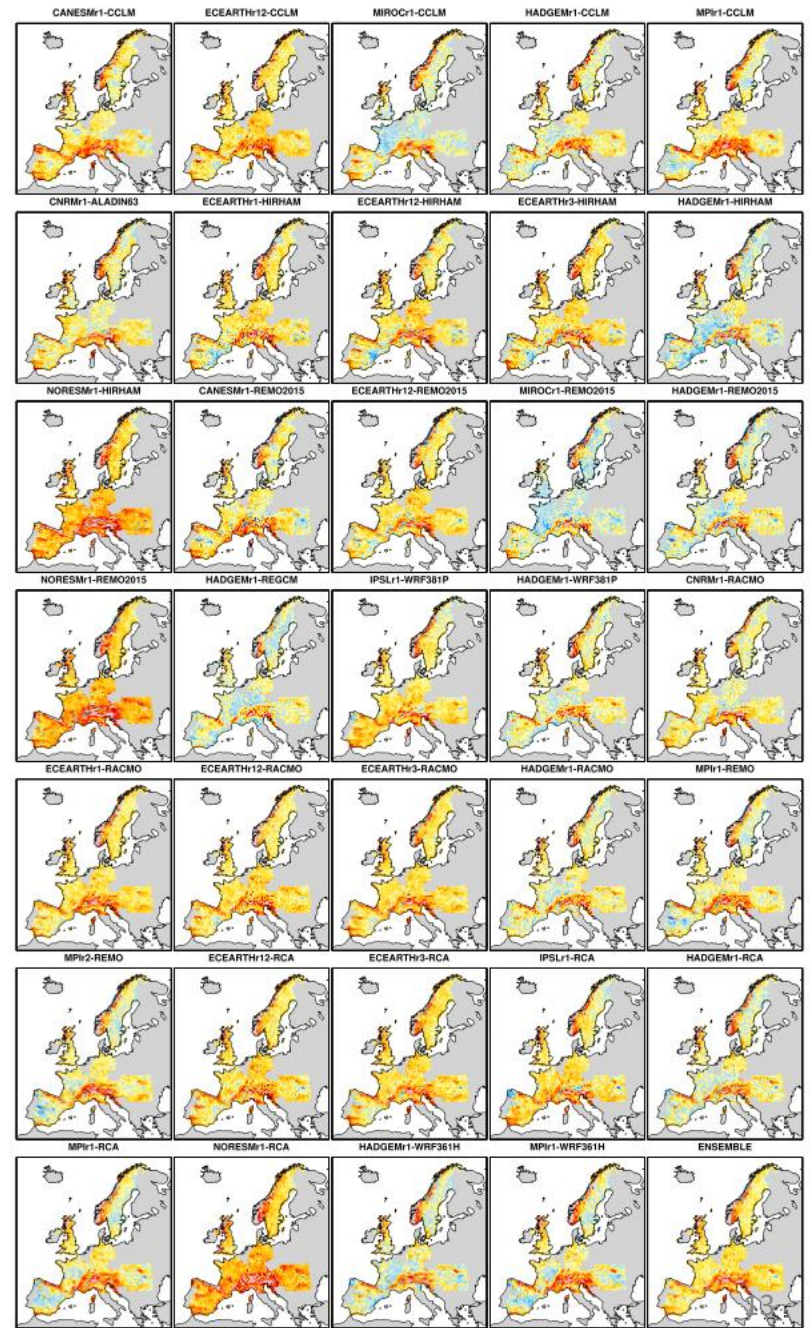

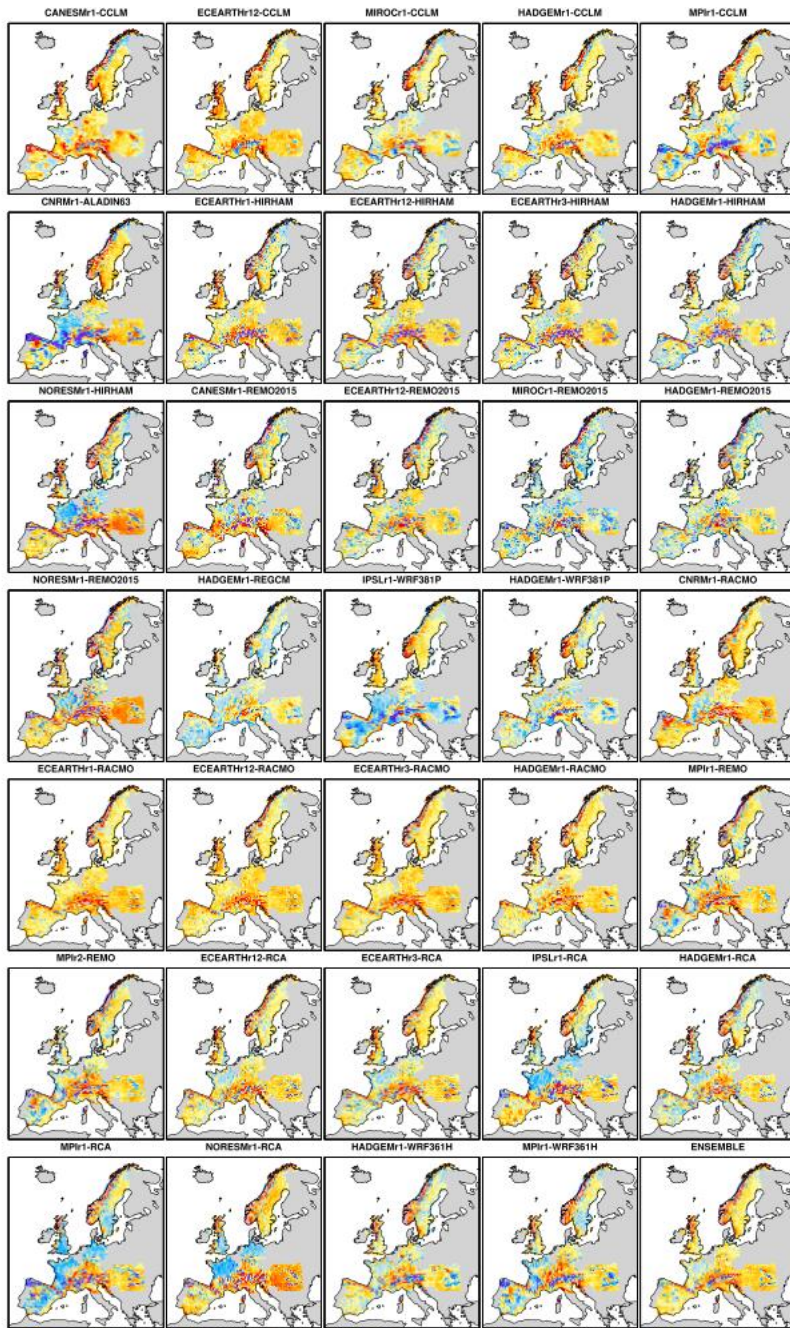

Added Value: *EURO-CORDEX* 12km

To be updated:
Currently at 53+ models

Extreme q95-100 fraction

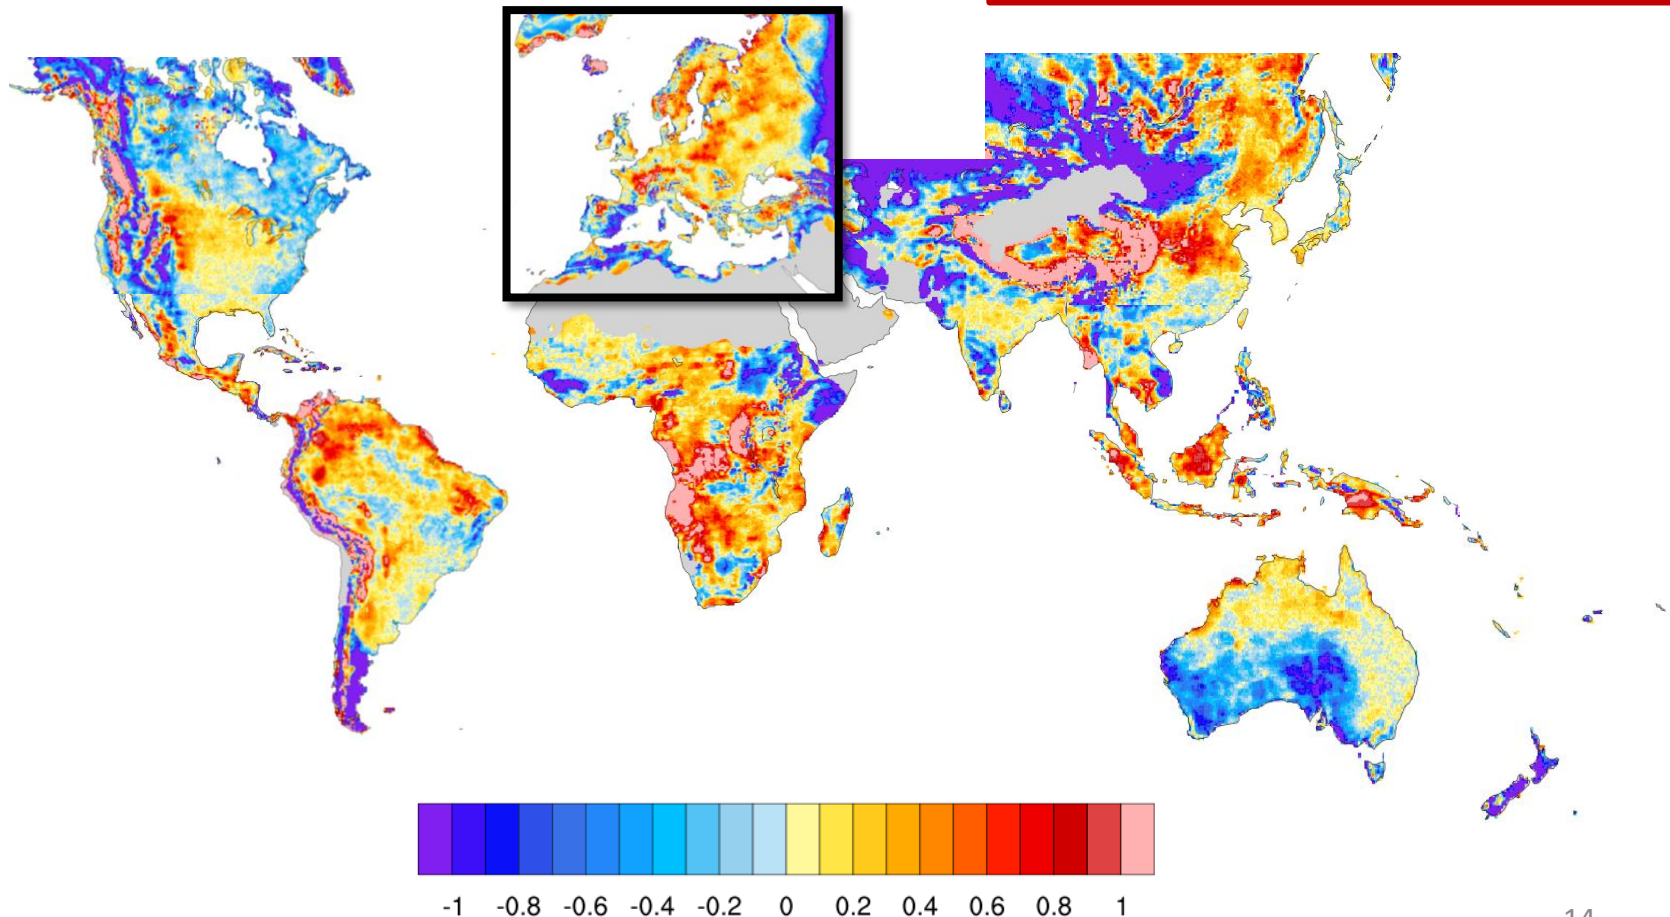

CORDEX-ATLAS

+ Moetasim Ashfaq, Melissa Bukovsky, Sushant Das, Xuejie Gao, Russell Glazer, Eun-Soon Im, Francesca Raffaele, Taleena Sines, Jose Abraham Torres Alavez + Avengers cast and many others...

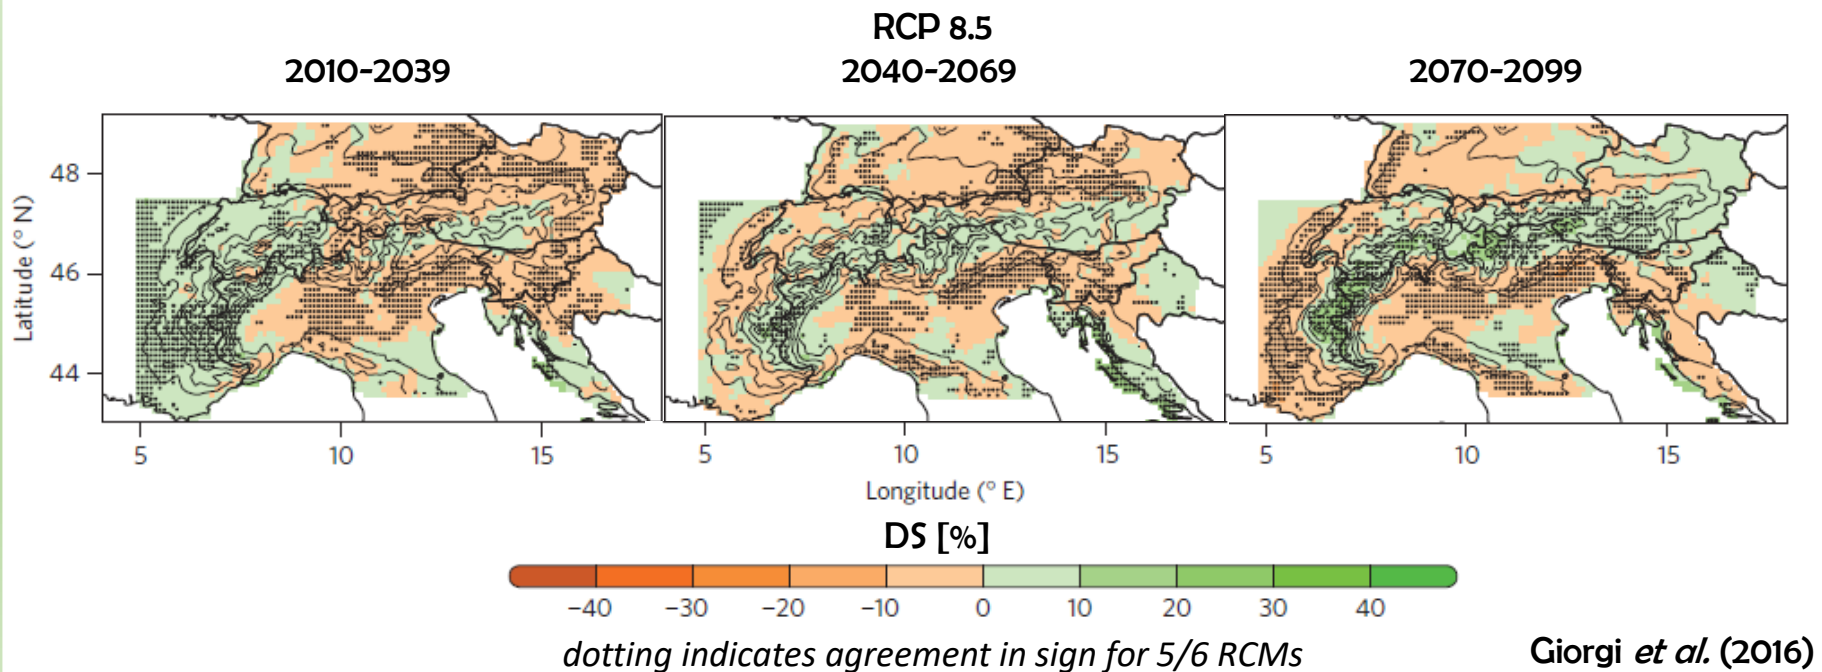

OBS: CPC 0.50°
GCM: MPI-M-MPI-ESM-{MR,LR}
daily p95-100 pr [1995-2014]

Downscaling Signal

Difference between RCM and GCM anomalies,
compared with the corresponding region-average change in each model.

$$DS(\Delta P) = (\Delta P_{RCM_i} - \Delta \bar{P}_{RCM_i}) - (\Delta P_{GCM_j} - \Delta \bar{P}_{GCM_j})$$

Adapting for Downscaling Signal

Difference between RCM and GCM anomalies,
compared with the corresponding region-average change in each model.

$$DS(\Delta P) = (\Delta P_{RCM_i} - \Delta \bar{P}_{RCM_i}) - (\Delta P_{GCM_j} - \Delta \bar{P}_{GCM_j})$$

Giorgi *et al.* (2016)

for EACH grid-cell!

Historical Data:

$$D_{MOD} = \frac{|\sum P_M \Delta v - \sum P_O \Delta v|}{\sum P_O \Delta v}$$

Future Data:

$$D_{MOD} = \frac{|\sum P_f \Delta v - \sum P_h \Delta v|}{\sum P_h \Delta v}$$

$$AV = D_{GCM} - D_{RCM}$$

Convective Permitting (3 km)

- 12 KM hydrostatic
- 23 v-levels

- 3 KM non-hydrostatic
- 41 v-levels

Thank You for your attention!
